

UV Water Purifier

POOL DISINFECTION WITH LIGHT

Endless Pools' Ultra-Violet water purifier uses UV light to sterilize organic pollutants such as algae, bacteria, and viruses, thus reducing the need for chemical sanitizers such as chlorine. Our UV system is particularly suitable for users who are sensitive to typical swimming pool disinfectants or heavy metals from ionic purifiers.

UV still needs to be used in conjunction with a sanitizer to "burn off" the dead organic matter killed by the UV system. We recommend simply using trace amounts (0.5 - 1 ppm) of regular household bleach, such as Clorox® or other generic brands. This level is lower than the EPA recommended chlorine level for drinking water.

BENEFITS:

- Provides sanitation against bacteria, viruses, cysts and protozoa
- Won't irritate eyes, skin or hair
- Reduces chloramines which cause odor, eye irritation and skin discomfort
- Will not affect pool water balance
- Contaminants inactivated on contact
- Frees chlorine to attack bacteria and waste
- Prevents algae blooms
- Environmentally friendly
